Are you concerned about printer security?

You should be.

Lindsey Hearst
Print Security Advisor, Channel Lead
April 29, 2019
• 93% of 2017 incidents were preventable with best practices

- In 2018, NSA stated 90% of cyber incidents are due to human error

United Kingdom National Audit Office

• 80% of cyber attacks are preventable with basic cyber hygiene

GOOD CYBER HYGIENE
Security by Obscurity

If no one notices the printer is vulnerable, then it isn’t vulnerable.
--- WHAT IS GOING ON ---

PewDiePie, the currently most subscribed to channel on YouTube, is at stake of losing his position as the number one position by an Indian company called T-Series, that simply uploads videos of Bollywood trailers and songs.

--- WHAT TO DO ---

1. Unsubscribe from T-Series
2. Subscribe to PewDiePie
3. Share awareness to this issue #SavePewDiePie
4. Tell everyone you know. Seriously.
5. BROFIST!

--- EXTRA POINTS ---

1. Subscribe to Dolan Dark
2. Subscribe to grandayy
3. Hit that dab like Wiz Khalifa
4. Delete TikTok
5. Smile, the world is a great place.
6. Nevermind it's 2018 and we're all gonna die
The risk is real

It’s easy for hackers to break into unsecured printers

“I probe around for a multifunction printer and see that it is configured with default passwords. Great, I am in…”

“We’ve compromised a number of companies using printers as our initial foothold. We move laterally from the printer, find Active Directory, query it with an account from the printer and bingo, we hit GOLD…”

Peter Kim
Industry-leading penetration tester, Hacker, Author
The search engine for the Internet of Things

Shodan is the world's first search engine for Internet-connected devices.

Explore the Internet of Things
Use Shodan to discover which of your devices are connected to the Internet, where they are located and who is using them.

Monitor Network Security
Keep track of all the computers on your network that are directly accessible from the Internet. Shodan lets you understand your digital footprint.

See the Big Picture
Websites are just one part of the Internet. There are power plants, Smart TVs, refrigerators and much more that can be found with Shodan.

Get a Competitive Advantage
Who is using your product? Where are they located? Use Shodan to perform empirical market intelligence.

And more. The Internet is a Search Engine.

The world’s most secure printing*

Real-time threat detection, automated monitoring, and built-in software validation

1. Check BIOS/boot code
   Prevents the execution of malicious code during bootup by allowing only HP-signed, genuine code to be loaded

2. Check firmware
   Allows only authentic, good firmware—digitally signed by HP—to be loaded

3. Check printer settings
   After a reboot, HP JetAdvantage Security Manager checks and fixes any affected security settings

4. Continuous monitoring
   Protects operations and stops attacks while device is running
   Inspects outgoing network connections to stop suspicious requests (Enterprise only)

---

**HP Sure Start**
During startup, the integrity of the boot code or BIOS is validated

**Whitelisting**
When loading firmware, only authentic, good code—digitally signed by HP—is loaded

**Run-time intrusion detection**
During run-time, HP printers detect and prevent unexpected changes to memory

**HP Connection Inspector**
When connecting to the network, HP Enterprise printers put a stop to suspicious requests

**Self-healing HP Enterprise and Managed printers**
can automatically repair themselves from attack in real time

**HP JetAdvantage Security Manager**
automatically assesses and remediates device security settings
Common imaging and printing vulnerability points

- **BIOS and firmware**: Compromised firmware can open a device and network to attack.

- **Management**: Undetected security gaps put data at risk.

- **Network**: Jobs can be intercepted as they travel to/from a device.

- **Control panel**: Users can exploit device settings and functions.

- **Ports and protocols**: Unsecured ports (USB or network) or protocols (FTP or Telnet) put device at risk.

- **Storage media**: Printers store sensitive information that can be at risk.

- **Capture**: Unsecured MFPs can be used to send scans anywhere.

- **Input tray**: Special media can be tampered with or stolen.

- **Output tray**: Abandoned documents can fall into the wrong hands.

- **Mobile printing**: On-the-go employees may expose data.

- **Output tray**: Abandoned documents can fall into the wrong hands.
CVE-2018-17310  On the RICOH MP C1803 JPN printer, HTML Injection and Stored XSS vulnerabilities have been discovered in the area of adding addresses via the entryNameIn parameter to /web/entry/en/address/addrSetUserWizard.cgl.

CVE-2018-17309  On the RICOH MP C406Z printer, HTML Injection and Stored XSS vulnerabilities have been discovered in the area of adding addresses via the entryNameIn parameter to /web/entry/en/address/addrSetUserWizard.cgl.

CVE-2018-17002  On the RICOH MP 2001 printer, HTML Injection and Stored XSS vulnerabilities have been discovered in the area of adding addresses via the entryNameIn parameter to /web/entry/en/address/addrSetUserWizard.cgl.

CVE-2018-17001  On the RICOH SP 4510SF printer, HTML Injection and Stored XSS vulnerabilities have been discovered in the area of adding addresses via the entryNameIn parameter to /web/entry/en/address/addrSetUserWizard.cgl.

CVE-2018-15748  On Dell 2335dn printers with Printer Firmware Version 2.70.05.02, Engine Firmware Version 1.10.65, and Network Firmware Version V4.02.15(2335dn MFP) 11-22-2010, the admin interface allows an authenticated attacker to retrieve the configured SMTP or LDAP password by viewing the HTML source code of the Email Settings webpage. In some cases, authentication can be achieved with the blank default password for the admin account. NOTE: the vendor indicates that this is an "End Of Support Life" product.

CVE-2018-14903  EPSON WF-2750 printers with firmware JP0212 do not properly validate files before running updates, which allows remote attackers to cause a printer malfunction or send malicious data to the printer.

CVE-2018-14900  EPSON WM-2750 printers with firmware JP0212, there is no filtering of print jobs. Remote attackers can send print jobs directly to the printer via TCP port 9100.

CVE-2018-14899  On the EPSON WF-2750 printer with firmware JP0212, the Web interface AirPrint Setup page is vulnerable to HTML Injection that can redirect users to malicious sites.

CVE-2018-10326  PrinterOn Enterprise 4.1.3 suffers from multiple authenticated stored XSS vulnerabilities via the (1) department field in the printer configuration, (2) description field in the print server configuration, and (3) username field for authentication to print as guest.

CVE-2018-1000537  Marlin Firmware Marlin version 1.1.x and earlier contains a Buffer Overflow vulnerability in cardreader.cpp (Depending on branch/version) that can result in Arbitrary code execution. This attack appear to be exploitable via Crafted G-Code instruction/file is sent to the printer.

CVE-2017-7998  Multiple cross-site scripting (XSS) vulnerabilities in gesspage before 7.4.9 allow remote attackers to inject arbitrary web script or HTML via the (1) printer name when adding a printer in the admin panel or (2) username parameter to webpage/users/user_reg.jsp.

CVE-2017-2788  A buffer overflows exists in the psnNotify application of the Pharos PopUp printer client version 9.0. A specially crafted packet can be sent to the victim's computer and can lead to a heap based buffer overflow resulting in potential remote code execution. This client is always listening, has root privileges, and requires no user interaction to exploit.

CVE-2017-2787  A buffer overflows exists in the psnNotify application of the Pharos PopUp printer client version 9.0. A specially crafted packet can be sent to the victim's computer and can lead to a heap based buffer overflow resulting in potential remote code execution. This client is always listening, has root privileges, and requires no user interaction to exploit.

CVE-2017-2786  A denial of service vulnerability exists in the psnNotify application of the Pharos PopUp printer client version 9.0. A specially crafted packet can be sent to the victim's computer and can lead to an out of bounds read causing a crash and a denial of service.

CVE-2017-2785  An exploitable buffer overflow exists in the psnNotify application of the Pharos PopUp printer client version 9.0. A specially crafted packet can be sent to the victim's computer and can lead to a heap based buffer overflow resulting in remote code execution. This client is always listening, has root privileges, and requires no user interaction to exploit.

CVE-2017-15400  Insufficient restriction of IPP filters in CUPS in Google Chrome OS prior to 62.0.3202.74 allowed a remote attacker to execute a command with the same privileges as the cups daemon via a crafted PPD file, aka a printer zeroconfig CRITICAL issue.

95% of new electronic designs will include IoT: By 2020, IoT technology will be in 95% of electronics for new product designs. Gartner, Smarter with Gartner, Gartner Top Strategic Predictions for 2018 and Beyond, October 3, 2017.

7.9B records exposed: 2017 saw more than 5,200 breaches that exposed nearly 7.9 billion records. 2017 Year End Data Breach QuickView Report by Risk Based Security / Cyber Risk Analytics, January 2018.

43% of companies ignore printers in their endpoint security practices. Only 16% of companies think printers are a high security risk: Spookwares study of 309 IT decision-makers in North America, EMENA, and APAC, on behalf of HP, November 2016.

61% of organizations reported at least a single print-related data breach in the past year: Quocirca, “Managed Print Services Landscape, 2016,” quocirca.com/content/managed-print-services-landscape-2016, July 2016.

94% of financial firms say copier/printer security is important or very important: InfoTrends, “Designing Hardware & Solutions,” Brendan Morse, October 2016.

HP Access Control must be purchased separately. To learn more, please visit hp.com/go/hpac.

HP FutureSmart feature availability: Some features enabled by future HP FutureSmart upgrades may not be available on older devices if, for example, physical product characteristics limit the functionality of the new feature.

HP JetAdvantage Insights is a web-based application that requires Internet access. Supported browsers include recent versions of Microsoft® Internet Explorer®, Google Chrome™, Mozilla® Firefox®, and Safari®. Learn more about HP JetAdvantage Insights at hp.com/go/JetAdvantageInsights.

HP JetAdvantage Private Print is available at no charge and requires that the printer be connected to the Internet with web services enabled. It is supported on devices with touchscreens. Not available in all countries. Learn more at hp.com/go/JetAdvantagePrivatePrint.

HP JetAdvantage Secure Print works with any network-connected printer or MFP. On-device authentication is available for many HP LaserJet, PageWide, and OfficeJet Pro devices. Some devices may require a firmware upgrade. Internet connection required for cloud storage and retrieval of print jobs. Print-job release from a mobile device requires a network connection and QR code. For more information, see hp.com/go/JetAdvantageSecurePrint.

HP JetAdvantage Security Manager must be purchased separately. To learn more, please visit hp.com/go/JetAdvantageSecurePrint.

HP Web Jetadmin is available for download at no additional charge at hp.com/go/webjetadmin.

Conditional security claims: Most comprehensive device, data and document security: Includes devices, data and document security capabilities by leading managed print service providers. Based on HP review of 2017 publicly available information on security services, security and management software and device embedded security features of their competitor in-class printers. For more information visit hp.com/go/MPSsecurityclaims or hp.com/go/mps.

Only HP offers a governance and compliance service: Based on HP internal research on competitor offerings of governance and compliance services. As of August 2016, only HP offers a service specifically for print devices.

Percent of end-point breaches has more than doubled in the last 6 years: Verizon, 2016 Data Breach Investigations Report, 2016, verizonenterprise.com/verizon-insights/lab/dbir/2016

Pro embedded security features: Select HP LaserJet Pro, OfficeJet Pro, and PageWide Pro devices include embedded features that can detect and stop an attack. For more information visit hp.com/go/PrintersThatProtect.

Remediation SLA: HP will endeavor to remotely provide 97% compliance remediation (“Remediation SLA”) for all qualifying devices that are viewable and remain in reporting status on the DCA. Any device that has security policies set to “detect presence only” and/or deemed to be a Non-Reporting Device at any time 30 days prior to Remediation SLA measurement, shall not be included in the measurement for the Remediation SLA.

The world’s most secure printers: HP’s most advanced embedded security features are available on HP Enterprise-class and Managed devices with FutureSmart firmware 4.5 or above and is based on HP review of 2017 published embedded security features of competitive in-class printers. Only HP offers a combination of security features for integrity checking down to the BIOS with self-healing capabilities. For a list of compatible products, visit hp.com/go/PrintersThatProtect.
