

# Puget Sound Pandemic Resilience Roadmap

PREVIEW DRAFT NOVEMBER 2022

---

## Note on this Draft

This is a working draft of the Roadmap, with some portions noted as incomplete. It is being shared in draft form for a workshop on November 10. We are looking for feedback on content, structure, and usability.

## How to use this Document

**The Roadmap is designed for use by a range of audiences and actors, including participants in both the public and private sectors. Some strategies are led by one sector or the other, while both sectors may play a leading role in other strategies.**

Use the [Summary Playbook](#), beginning on the following page, as a shortcut into different sections of the **Roadmap**, which contains more detailed strategies organized in three sections:

- [Public Health Infection Reduction Strategies](#) provides guidance for policy makers with influence over the interventions established to prevent spread of the disease.
- [Cross-Sector Strategies](#) are applicable to many, most, or all sectors.
- [Focus Sector-Specific Strategies](#) are tailored to key strategies selected based on their importance to the Puget Sound economy.

The document concludes with suggested [Pre-Pandemic Preparations](#) to help the public and private sectors get ready for future emergencies and a short list of [Thematic Learnings](#) from the COVID-19 experience.

Throughout the document, *click on text underlined in blue* to be taken to relevant content within the Roadmap or to external resources. The menu in the footer can be used to navigate to major sections.
